products

SARANEX

SARANEX* films provide a proven barrier to gases, water vapor and aromas. A layer of film produced from Saran* barrier resin is integrally coextruded between outer layers of polyolefins. The result is a product with the barrier properties of Saran combined with the machinability, printability and functionality of polyolefin skins.

SARANEX films are well suited for such applications as cheese packaging, sausage chubs and capliners. They offer excellent resistance to a wide variety of chemicals for chemical-resistant clothing. They can also be laminated to other films and substrates for additional barrier functionality. For more information on medical applications, please visit <u>Dow Medical Films</u>.
